

COURIER MANAGEMENT SYSTEM (CMS)

PROJECT DOCUMENTATION

Salesforce-based Courier & Logistics Management Solution

Final Submission Document

PROJECT OVERVIEW

Courier and logistics companies often face difficulty managing shipments and deliveries because of manual operations and disconnected systems. The Courier Management System (CMS) is designed to centralize courier operations on Salesforce. It supports shipment booking, real-time tracking, delivery-agent assignment, billing, reporting and dashboard-based monitoring.

Purpose

The purpose of CMS is to replace fragmented manual processes with an integrated digital platform. The system is intended to improve operational visibility, reduce errors and delays, support customer communication, and provide managers with useful operational information.

Core Modules

- Customer Management
- Shipment Management
- Delivery Agent Management
- Branch Management
- Delivery Updates
- Invoice Management
- Reports and Dashboards

1. BRAINSTORMING & IDEATION PHASE

Identifying the courier-management problem and selecting the proposed Salesforce solution.

Problem Statement

Branch managers need to manage shipments efficiently, but manual tracking and disconnected systems can create operational stress. Customers may receive delayed updates when there is no centralized tracking mechanism.

Empathy Map – Branch Manager

- Think & Feel: Concerned about delays and errors
- Hear: Customer complaints
- See: Registers and spreadsheets
- Say & Do: Manual follow-ups
- Pain: Delivery conflicts and missed updates
- Gain: Automated tracking and dashboards

Brainstorming & Idea Prioritization

- Manual registers
- Spreadsheet tracking
- Standalone portal
- Salesforce CRM

The project document identifies Salesforce CRM as the selected approach because of automation, scalability and real-time visibility.

2. REQUIREMENT ANALYSIS PHASE

Defining the journey, functional requirements, quality requirements, data flow and technology stack.

Customer Journey

Booking → Shipment Creation → Agent Assignment → Transit → Delivery Update → Invoice → Reporting

Functional Requirements

- Customer management
- Shipment booking
- Delivery-agent assignment
- Real-time status updates
- Invoice generation
- Reports and dashboards

Non-Functional Requirements

- Usability – easy Lightning interface
- Security – role-based access control
- Reliability – consistent automation
- Performance – fast tracking updates
- Availability – 24/7 cloud access
- Scalability – support for growing branches

Data Flow

Customer Input → Shipment Creation → Validation → Agent Assignment → Delivery Update → Invoice → Reports

Technology Stack

Layer	Technology
UI	Salesforce Lightning
Logic	Salesforce Flows
Database	Salesforce Objects
Automation	Validation Rules, Flows
Security	Profiles, Roles
Reporting	Reports & Dashboards

3. PROJECT DESIGN PHASE

Converting the requirements into a centralized Salesforce solution architecture.

Problem–Solution Fit

CMS addresses fragmented courier operations by centralizing shipment tracking, delivery assignment, billing and reporting within Salesforce.

Proposed Solution

- Problem: Manual shipment management
- Solution: Salesforce CMS
- Innovation: Automated tracking and billing
- Impact: Faster and more visible delivery operations
- Business Model: Courier services
- Scalability: Multi-branch ready

Solution Architecture

- Customer Object
- Shipment Object
- Delivery Agent Object
- Branch Object
- Delivery Update Object
- Invoice Object
- Flows
- Reports
- Dashboards

4. PROJECT PLANNING PHASE

Planning development through Agile methodology, user stories, sprints and story points.

Agile Planning

The project uses Agile methodology with epics, user stories, story points and sprint-based execution. The supplied project plan covers developer setup, data modeling, automation, security, reports and dashboards.

Planned User Stories

Story	Task	Points	Priority
USN-1	Create and configure a Salesforce developer account	3	High
USN-2	Create CMS objects and relationships	5	High
USN-3	Create tabs and Lightning App	5	High
USN-4	Validate shipment details	3	High
USN-5	Automate status updates and agent assignment	3	High
USN-6	Configure role-based access control	5	High
USN-7	Create delivery, shipment and revenue reports	4	High
USN-8	Create dashboard views	4	Medium

5. PROJECT DEVELOPMENT PHASE

Implementing objects, relationships, validation, automation, app configuration, security and reporting.

Development Activities

- Salesforce Developer Account setup
- Custom objects and relationships
- Fields, page layouts and record configuration
- Validation rules
- Salesforce Flow automation
- Courier Management Lightning App
- Profiles, roles and access control
- Reports and dashboards
- End-to-end application testing

CMS Objects

Customer, Shipment, Delivery Agent, Branch, Delivery Update and Invoice objects form the core data model. Relationships connect operational records so shipment status, agent assignment, billing and reporting can be managed together.

Object Configuration

Optional Features

☒ Allow Reports

☒ Allow Activities

☒ Track Field History

☐ Allow in Chatter Groups

☐ Enable Licensing [?](#)

Object Classification

When these settings are enabled, this object is classified as an Enterprise Application object. When these settings are disabled, this object is classified as a Light Application object. [Learn more.](#)

☒ Allow Sharing

☒ Allow Bulk API Access

☒ Allow Streaming API Access

Deployment Status

☐ In Development

☒ Deployed

Search Status

When this setting is enabled, your users can find records of this object type when they search. [Learn more.](#)

☒ Allow Search

Object Creation Options (Available only when custom object is first created)

☒ Add Notes and Attachments related list to default page layout

☐ Launch New Custom Tab Wizard after saving this custom object

6. PROJECT TESTING PHASE

Verifying records, validation, automation, delivery updates, invoices, security and dashboards.

Testing Scope

- Record creation – Customer, Shipment, Agent, Branch, Update and Invoice records
- Validation – incomplete or invalid data is controlled
- Relationships – related records use configured relationships
- Automation – delivery updates can synchronize shipment status
- Security – profiles and roles provide configured access
- Reports – expected records appear in reports
- Dashboard – visual components reflect report data

Demonstration Test Sequence

Open the CMS app → show customer/shipment data → demonstrate a status update → show validation/automation → open reports → open dashboard → explain the resulting operational view.

7. PROJECT DOCUMENTATION PHASE

Recording advantages, limitations, conclusion, future scope and supporting references.

Advantages

- Centralized data
- Automated workflows
- Real-time reporting and visual monitoring

Disadvantages

- Dependence on the Salesforce platform
- Initial configuration effort is required

Conclusion

The Courier Management System digitizes courier operations using Salesforce. It brings customer management, shipment booking, delivery-agent assignment, delivery updates, billing, security, reports and dashboards into a connected platform. Validation and automation support consistent data handling, while reports and dashboards provide operational visibility.

Future Scope

- Mobile tracking application
- GPS integration
- SMS notifications
- AI-based delivery optimization

8. PROJECT DEMONSTRATION PHASE

Presenting the implemented Salesforce workflow and its supporting screenshots.

Demonstration Sequence

1. Open the Courier Management System Lightning App.
2. Show customer and shipment records.
3. Demonstrate delivery-agent assignment and a delivery-status update.
4. Demonstrate validation and Flow automation.
5. Open reports for shipment status, agent performance and revenue.
6. Open the Courier Management Dashboard and explain the visual components.

Project Evidence

The screenshots included in this document are taken from the supplied CMS project PDF and placed alongside the relevant development, testing and demonstration sections.

REFERENCES & PROJECT COMPLETION

- Salesforce Lightning platform and Salesforce configuration used for the CMS implementation.
- Salesforce Objects, Relationships, Validation Rules, Flows, Profiles and Roles.
- Salesforce Reports and Dashboards configured for courier operations.
- Courier Management System project document and supplied implementation screenshots.
